Phone: 517-655-8482

### **Application Instructions:**

#### STEP 1:

Center (1) section of pole guard next to curb side of pole.

#### STEP 2:

Place one ratchet strap towards top section of guard and wrap around pole and guard, hooking ratchet ends together. Pull strap tight and start ratcheting the strap, keeping the ratchet against the guard surface.

#### STEP 3:

Place 2nd strap towards bottom of guard and repeat step 2.

*Note: Keep bottom of guard 6"-12" above grade*

#### STEP 4:

Alternate top and bottom ratchets, tighten one ratchet at a time until guard is wrapped tight around pole.

#### STEP 5:

Drive lag screw through predrilled holes, which should be positioned opposite the curb edge. Remove straps.

#### STEP 6:

Install 2nd section of the pole guard following steps 1-4, and before guard becomes tight, raise guard above lower section maintaining 1/4"-1/2" overlap of the sections. Finish tightening and driving the lags as stated in Step 5, then remove straps.

#### NOTES:

*Be sure Pole Guard covers pole surfaces that are exposed to being rubbed by semi-trucks/traffic.*

*Lag screws should never be exposed to traffic*

*Guard width may be trimmed down using a standard circular saw and Re-drill 5/16" holes. Holes to have 7" spacing.*
